<u>Dashboard</u> / <u>My courses</u> / <u>PSPP/PUP</u> / <u>Experiments based on Tuples, Sets and its operations</u> / <u>Week7 Coding</u>

Started on	Friday, 24 May 2024, 8:08 AM
State	Finished
Completed on	Saturday, 25 May 2024, 9:26 AM
Time taken	1 day 1 hour
Marks	5.00/5.00
Grade	100.00 out of 100.00

```
Question 1
Correct
Mark 1.00 out of 1.00
```

Write a program to eliminate the common elements in the given 2 arrays and print only the non-repeating elements and the total number of such non-repeating elements.

Input Format:

The first line contains space-separated values, denoting the size of the two arrays in integer format respectively.

The next two lines contain the space-separated integer arrays to be compared.

Sample Input:

5 4

12865

26810

Sample Output:

1 5 10

3

Sample Input:

5 5

12345

12345

Sample Output:

NO SUCH ELEMENTS

For example:

Input	Result
5 4	1 5 10
1 2 8 6 5	3
2 6 8 10	

Answer: (penalty regime: 0 %)

```
n, m = map(int, input().split())
   array1 = list(map(int, input().split()))
3 | array2 = list(map(int, input().split()))
4 set1 = set(array1)
5
   set2 = set(array2)
    symmetric_diff = set1.symmetric_difference(set2)
    non\_repeating\_elements = [x for x in symmetric\_diff if x not in set1 or x not in set2]
8 ▼ if non_repeating_elements:
        print(*non_repeating_elements)
9
10
        print(len(non_repeating_elements))
11 v else:
        print("NO SUCH ELEMENTS")
```

	Input	Expected	Got	
~	5 4	1 5 10	1 5 10	~
	1 2 8 6 5	3	3	
	2 6 8 10			
~	3 3	11 12	11 12	~
	10 10 10	2	2	
	10 11 12			

Passed all tests! 🗸

Correct

Marks for this submission: 1.00/1.00.

11

Question ${\bf 2}$

Correct

Mark 1.00 out of 1.00

Given an array of integers nums containing n + 1 integers where each integer is in the range [1, n] inclusive. There is only **one repeated number** in nums, return this repeated number. Solve the problem using <u>set</u>.

Example 1:

```
Input: nums = [1,3,4,2,2]
```

Output: 2

Example 2:

```
Input: nums = [3,1,3,4,2]
```

Output: 3

For example:

Input	Result
1 3 4 4 2	4

Answer: (penalty regime: 0 %)

```
1 ▼ def find_duplicate(nums):
2
        seen=set()
3 🔻
        for num in nums:
4
            if num in seen:
5
                return num
6
            seen.add(num)
7
   nums=list(map(int, input().split()))
8
    print(find_duplicate(nums))
10
```

	Input	Expected	Got	
~	1 3 4 4 2	4	4	~
~	1 2 2 3 4 5 6 7	2	2	~

Passed all tests! ✓

Correct

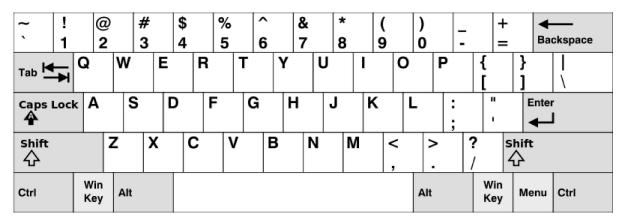

Marks for this submission: 1.00/1.00.

```
Question 3
Correct
Mark 1.00 out of 1.00
```

Given an array of <u>strings</u> words, return the words that can be typed using letters of the alphabet on only one row of American keyboard like the image below.

In the American keyboard:

- the first row consists of the characters "qwertyuiop",
- the second row consists of the characters "asdfghjkl", and
- the third row consists of the characters "zxcvbnm".

Example 1:

```
Input: words = ["Hello","Alaska","Dad","Peace"]
Output: ["Alaska","Dad"]
```

Example 2:

```
Input: words = ["omk"]
Output: []
```

Example 3:

```
Input: words = ["adsdf","sfd"]
Output: ["adsdf","sfd"]
```

For example:

Input	Result
4 Hello Alaska Dad Peace	Alaska Dad
2 adsfd afd	adsfd afd

Answer: (penalty regime: 0 %)

```
print("\n".join(result))

relse:
    print("No words")
```

	Input	Expected	Got	
~	4 Hello Alaska Dad Peace	Alaska Dad	Alaska Dad	~
~	1 omk	No words	No words	~
~	2 adsfd afd	adsfd afd	adsfd afd	~

Passed all tests! 🗸

Correct

Marks for this submission: 1.00/1.00.

```
Question 4
Correct
Mark 1.00 out of 1.00
```

The **DNA sequence** is composed of a series of nucleotides abbreviated as 'A', 'C', 'G', and 'T'.

• For example, "ACGAATTCCG" is a **DNA sequence**.

When studying **DNA**, it is useful to identify repeated sequences within the DNA.

Given a string s that represents a **DNA sequence**, return all the **10-letter-long** sequences (substrings) that occur more than once in a DNA molecule. You may return the answer in **any order**.

Example 1:

```
Input: s = "AAAAACCCCCAAAAAACCCCCCAAAAAAGGGTTT"
Output: ["AAAAACCCCC", "CCCCCAAAAA"]
```

Example 2:

```
Input: s = "AAAAAAAAAAA"
Output: ["AAAAAAAAAAA"]
```

For example:

Input	Result
AAAAACCCCCAAAAACCCCCCAAAAAGGGTTT	AAAAACCCCC
	CCCCCAAAAA

Answer: (penalty regime: 0 %)

```
s = input()
   A = set()
2
3
   B = set()
    for i in range(len(s) - 9):
4 ▼
        C = s[i:i + 10]
5
6 •
        if C in A:
7
            B.add(C)
8 🔻
        else:
9
            A.add(C)
10 v for seq in B:
11
        print(seq)
```

	Input	Expected	Got	
~	AAAAACCCCCAAAAACCCCCCAAAAAGGGTTT	AAAAACCCCC	AAAAACCCCC	~
		CCCCCAAAAA	CCCCCAAAAA	

	Input	Expected	Got	
~	АААААААААА	АААААААА	АААААААА	~

Passed all tests! 🗸

Correct

Marks for this submission: 1.00/1.00.

```
Question 5
Correct
Mark 1.00 out of 1.00
```

Coders here is a simple task for you, Given string str. Your task is to check whether it is a binary string or not by using python set.

Examples:

Input: str = "01010101010"

Output: Yes

Input: str = "REC101"

Output: No

For example:

Input	Result
01010101010	Yes
010101 10101	No

Answer: (penalty regime: 0 %)

```
1 ▼ def is_binary_string(s):
        binary_set = {'0', '1'}
2
3
        return set(s).issubset(binary_set)
4
5 🔻
   def main():
6
        s = input().strip()
7
        if is_binary_string(s):
8
            print("Yes")
9 •
        else:
10
            print("No")
11
12 • if __name__ == "__main__":
13
        main()
14
```

	Input	Expected	Got	
~	01010101010	Yes	Yes	~
~	REC123	No	No	~
~	010101 10101	No	No	~

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.
